

Business Reequipments and Analysis.

Financial Protection (FP) Evidence of Insurability (EOI) Intake Process

What is Financial Protection (FP)?

Financial Protection (FP) consists of non-medical insurance products offered primarily to employees through their employers.

Examples Of FP Product:

- Life Insurance
- Short-Term Disability (STD)
- Long-Term Disability (LTD)
- Critical Illness Insurance
- Accident Insurance
- Hospital Indemnity
- Supplemental Health Products
- Etc.

These products protect employees from large financial losses caused by illness, disability, or death.

Target Audience:

- Commercial employer groups
- Employer-sponsored benefits

Not included:

- Medicare
- Medicaid
- Government programs

Evidence of Insurability (EOI)

EOI is the process used to determine whether a person qualifies certain Financial Protection insurance products.

It's a medical underwriting process required for certain FP products (like critical illness, supplemental health)

An underwriter reviews each application case-by-case to verify the applicant truly has the claimed condition and doesn't have excluded conditions

Purpose: Prevent adverse selection and ensure the applicant qualifies before coverage is approved, and future claims can be paid.

FP products are a guaranteed issue. For high-risk products (critical illness, certain supplemental coverages), UHC must verify health status before approving the application.

Some insurance plans require medical evaluation before approval.

Example:

Employee wants:

- Critical Illness Insurance
- Before approval, the employee must provide:
- Medical history
- Health condition
- Required documents
- Supporting evidence

The insurance underwriter reviews the application and decides:

- Approved
- Denied
- More information required

Intake Process (How Application Arrive)

Ste1 Flow:

Step 2 — Intake Channels (Applications arrive through multiple channels).

- Paper
- Mail / Fax
- Portal/Adobe
- Questionnaire
- Email attachment

Formats: Mailed, faxed, or emailed as PDF/image attachments

What Data is Collected During EOI Intake?

Applicant Information

- Group/Employer number
- Employee SSN, DOB, height, weight
- Contact details
- Date of hire
- Current coverage details
- Requested new coverage amount

Medical History Statement (MHS)

The EOI form is essentially a health questionnaire that asks:

Initial Screening Questions (typically 3 core questions):

1. **Past 7 years:** Diagnosed/treated for serious conditions? (Cancer, heart disease, diabetes, HIV, stroke, MS, etc.)
2. **Past 5 years:** Hospitalized, had surgery, or received treatment for any reason?
3. **Future:** Any recommended inpatient/outpatient procedures pending?

If "Yes" is answered → triggers **additional questionnaires** specific to the condition (e.g., cancer questionnaire, cardiac questionnaire)

Signature & Authorization

- **Wet signature or e-signature** required (typed signatures are rejected)
- Authorization to request medical records from providers

The Indexing Process (Critical for Your Solution)

What is Indexing? Indexing is the process of **classifying and extracting key data fields** from incoming documents so they can be routed to the correct workflow in OnBase.

Resource Business Systems

FP Portal: Employee Self-Service

Adobe eSign : Digital Signature

OnBase: Document Management & Case Creation

Email : Intake Channel

Mail/Fax : Paper Intake

Basic Flow:

After Intake Underwriter process

Underwriting Review Workflow (Post-Intake)

Once indexed in OnBase, the EOI application enters the Medical Evidence Underwriting (MEU) queue:

Underwriter Review Steps:

Initial Review — Underwriter checks completeness:

- All fields filled?
- Valid signature?
- Height/weight provided?
- Health history questions answered with details?

Pend for Additional Info (if incomplete):

- Missing details on form
- "Yes" answered but no condition details provided
- Need medical records from providers
- Need paramedical exam (for coverage $\geq$ \$500K)

Medical Records Request:

- Underwriter requests records from physician
- Applicant or provider sends records via fax/mail/email
- These also need indexing! (another manual touchpoint)

Underwriting Decision:

-  Approved at standard rates
-  Approved at increased rates
-  Approved with exclusions (specific conditions excluded)
-  Denied

Communication:

- Decision sent to applicant and employer
- Employer must NOT collect premiums until EOI is approved

Questionnaire Processing (Another Manual Touchpoint):

Your customer mentioned: "questionnaire is still manual"

What this means:

- When an applicant answers "Yes" to a health history question, a condition-specific questionnaire is triggered
- Example: If applicant marks "Cancer," a cancer-specific questionnaire must be completed
- Currently, this is likely:
 - Sent manually (mail/email) to applicant
 - Received back manually (paper/email)
 - Manually indexed into OnBase
 - Manually attached to the original EOI case
 - This is a second document type that needs automation alongside the main EOI form.

Draft Entity Data Model

Draft Entity Model For EOI Process Validation
